

## Day - 2 Task

1. Write a program to create a page the same as in the given image:

**1 Candidate Info**

Your Name \*

Your Email \*

About yourself

Interests:

Fishing

**2 Additional Info**

About Your School

Submit

2. Create a web page with a news channel headline (scrolling text effect).

Reference image:-

Note:- this is just a reference image no need to create a similar-looking page.

3. Create a web page with a keyframe animation including three different animations for a single element where different animations will be applied based on the click of a button. I.e there will be three buttons that will be used to change the animation effect for the same HTML element.
4. Create a web page with a simple responsive form asking for user details such as email address and password. The stylesheet defines two different layouts: one for desktop screens and one for mobile screens.

5. 3rd task - form already created on day 1, now you have to store that data in a database here we will be using MySQL/Firebase (database) - Please refer to its documentation for more detail. At last, whatever data users insert in a form must be stored in the Database.
